AMPHIPOD NEWSLETTER 44

Dear Amphipodologists,

We hope this newsletter finds of you safe and healthy. The time since many of us last met in Dijon for a wonderful week of amphipodology has been difficult and heartbreaking. Many of us have also been sent into isolation and "home-officing", and the daily contact with our colleagues is now more than ever depending on emails and electronic platforms for contact. Conferences and meetings are rapidly being moved to electronic platforms or postponed, the latter being the case for our beloved ICA, see more about that on page 64.

We are happy to see that the facebook group is active, and our bibliography might give indication that, for some of us, the time away from the lab has brought about the possibility to focus on writing. Writing publications is not an easy task when combined with homeschooling or care for family-members and neighbours "locked up" in their homes, and we are very impressed with the 397 publications the bibliography presents. Also, make sure to check out the last page for a new feature: "the old photo". We hope this will bring happy memories to some, and pleasure to all.

2020 has also seen the debate of scientific recognition (in the form of impact factor) for one of the journals several of our taxonomy-oriented colleagues are using - Zootaxa. After a month of not being considered for IF, we are happy the journal again is "counted".

We have lost our cherished fellow amphipodologists Jean-Claude Sorbe and Vadim V. Takhteev since we published the last newsletter, and in their honour we bring their In Memoriams, written by their friends and colleagues. Augusto Vigna Taglianti, known to many for his work on amphipods with Sandro Ruffo, is remembered in *Fragmenta ecologica* 51(2): 105-125 (2019).

Statistics from this Newsletter

4 new higher taxa

7 new families

3 new subfamilies

19 new genera

92 new species

Wim and Anne Helene

Jean-Claude Sorbe In Memoriam

Jean-Claude Sorbe died at the end of 2019 following a heart attack after a trek in the Pyrénées, an activity that was one of his passions.

On my return from Quebec in 1987, after having done part of my post-doctorate with the Professor Pierre Brunel of the University of Montreal on the suprabenthic communities of the Gulf of St-Lawrence, and built a suprabenthic sledge inspired of Brunel type, that we started working together in 1989 as part of the thesis of Marta Elizalde.

Jean-Claude in the collections at the Arcachon Marine Station, from *Le Bassin Magazine*, 2011

Like several researchers who worked on the stomach contents of the demersal fish, Jean-Claude was impressed by the number of crustaceans consumed by these fish living near the sea bottom, while their abundance sometimes seems low in the benthic sampling with dredges or grabs gears.

Born in 1947, in the Dordogne, to whom he remained strongly attached, and where he learned his first experience with the natural sciences in the sampling of freshwater aquatic environments, he studied natural sciences at the University and completed his postgraduate thesis in 1972 at the University of Aix-Marseille on the ecology and food ethology of the demersal fish from the southern continental shelf of the Bay of Biscay. During his thesis, he collected fish offshore Arcachon by embarking on professional trawlers. After a period of cooperation as a teacher in Algeria, he returned to France where he was appointed as a researcher at the Centre National de la Recherche Scientifique (CNRS) in the late 1970s.

It was, in 1978, that he used for the first time a suprabenthic sledge off the Basque Country on the continental shelf at a depth of about 100 m. Then he built several sledges before arriving at a more definitive form allowing both to sample the water-sediment interface and the first meter of the water layer just above the bottom. Hyperbenthos – Suprabenthos was the subject of long discussions and questions that we had, and Jean-Claude even questioned the French Academy which confirmed that the right term was the suprabenthos.

The suprabenthos fascinated Jean-Claude all the rest of his career punctuated by the defence of his '*thèse d'Etat*' in 1984 at the University of Bordeaux on the subject: Contribution to the knowledge of the suprabenthic communities from the southern part of the Bay of Biscay. It was in this area that Jean-Claude had made more his samplings of the bathyal fauna of the continental slope often difficult to sample given the depth and the presence of canyons. The canyons of Cap Ferret and Cape Breton had no secrets for Jean-Claude, it was there that he made the greatest part

of his sampling at sea on oceanographic boats and in particular the '*Côte d'Aquitaine*', with which he explored the upper part of the continental slope with *Marat*, and I was able to participate in some campaigns with Jean-Claude and *Marat*, then it went deeper up to 3,000 m in the canyons of Cape Breton and Cape Ferret. It was an opportunity for him to participate in national programs coordinated by his laboratory colleagues on the functioning of the deep ecosystem of the southeast Bay of Biscay.

I also had the pleasure of participating with Jean-Claude in an expedition south of the Azores to explore the deep seamounts in 1993 aboard the Oceanographic Vessel *the Suroit*. We were able to sample the suprabenthos from the seamount summits like Meteor and Atlantis but also on the slope up to 2250 m. In the mid-1990s, a publication began, on the presence of the neritic mysid *Anchialina agilis* on these offshore systems. This project was orphaned. It remains for me to finish this paper; it will be my tribute to Jean-Claude.

During the campaigns at sea, I was able to appreciate how happy Jean-Claude was and participated in the life of the researchers on board with very good relations with all the crews of the oceanographic ships. This was in contrast to Jean-Claude at the Arcachon Marine Station, where he was seen as a discreet or secret researcher, often working alone and asking very little for the laboratory's financial resources. However, he has also helped many students and doctoral students at the Arcachon Marine Station in the identification of crustaceans including amphipods. Moreover, it was most often with his own resources that he financed part of the small material needed for his collections and his participation in national or international scientific conferences and symposia, often accompanied by his wife Aouda, who actively and continuously participated in the sorting of Jean-Claude's many samples. She regularly came to the laboratory to help Jean-Claude; his brutal death is a terrible ordeal for her as their relationship was so close.

Jean-Claude had always much international collaboration, especially with many Spanish and Portuguese colleagues. He published many notes on the suprabenthos with several colleagues including Joan Cartes, Carlos San Vicente, Jordi Corbera, Inmaculada Frutos with whom he worked in recent years of his scientific activity. He also made some publications with our colleague Jose Manuel Guerra-García. He had the opportunity to work on the suprabenthos of the Mediterranean Sea, Catalan Sea and along the coast of Israel and the Levantine Basin in the eastern Mediterranean Sea, and in the Antarctic Ocean, around the South Shetland Islands and Bransfield Strait. During his career, he had participated in oceanographic campaigns in Antarctica and off the Israeli coast. Recognized as a specialist in amphipods, he was associated with the exploitation of samples coming from southern Spain or southern Iceland in the Atlantic or from campaigns in Papua New Guinea, which were the subject of descriptions of new species for science.

Although modest on the administrative aspects of the research, he co-organized with his colleague Jean-Marie Jouanneau, the third International Symposium of Oceanography of the Bay of Biscay, at the Marine Station of Arcachon in 1993, colloquia in which he highlighted his numerous collaborations with his Spanish colleagues.

Recently, always with his Spanish colleagues, he explored an area still very little known: the Le Danois Bank, off the coast of Cantabria, surrounded by a complex system of canyons and channels, at depths ranging from 500 to 4,000 m.

All the work carried out by Jean-Claude in the Bay of Biscay has made it possible to know much better the continental platform off Arcachon, as well as the underwater canyons of Cap Ferret and Cap Breton.

Since his retirement in 2012, he has continued to work at home where he had set up a laboratory at the same time by continuing contributions with colleagues at the Arcachon Marine Station and in particular with Benoit Gouillieux on the amphipods, but also with Laure Corbari as correspondent at the Muséum national d'Histoire naturelle in Paris, the address he gave for his last publications. Jean-Claude has made good use of much of his biological material collected throughout his career and preserved in good condition and in his collections accumulated over time are precious that still need to be studied. Who will spend time on it is a real question.

In fact, Jean-Claude Sorbe did little work on the Arcachon Basin, but he recently intervened to identify invasive species including isopods, probably imported in the 1970s at the same time as the Japanese oyster *Crassostrea gigas*.

He will remain the man of the deep suprabenthos of the Bay of Biscay, an excellent zoologist, an incomparable observer, a field oceanographer, a perfectionist and an indefatigable worker.

Among the suprabenthic fauna, that of the Peracarida is particularly rich, Jean-Claude was interested in three groups, the amphipods, the cumaceans and the mysids. But he also described new species of isopods.

Jean-Claude Sorbe had described 12 new species and two new genera of amphipods for the science:

- Apherusa delicata* Krapp-Schickel & Sorbe, 2006
- Autonoe catalaunica* Ruffo, Cartes & Sorbe, 1999
- Bathymedon longirostris* Jaume, Cartes & Sorbe, 1998
- Carangolia barnardi* Jaume & Sorbe, 2001
- Dorotea* Corbari, Frutos & Sorbe, 2019
- Dorotea papuana* Corbari, Frutos & Sorbe, 2019
- Dulichlopsis diana* Corbari & Sorbe, 2017
- Elasmopus thalyae* Gouillieux & Sorbe, 2015
- Eusirus bonnieri* Peña Othaitz & Sorbe, 2020
- Leucothoe cathalaa* Frutos & Sorbe, 2012
- Liropus cachuchoensis* Guerra-García, Sorbe & Frutos, 2007
- Papudocus* Corbari & Sorbe, 2015
- Papudocus blodiwai* Corbari & Sorbe, 2015
- Protoaeginella spinipoda* Laubitz & Sorbe, 1996

He is also the author of the descriptions of nine other new species for science including one Ciliophora, five isopods and three mysids.

Six species have been dedicated to Jean-Claude Sorbe, including a polychaete, a Scyphozoa Coronamedusae, a cumacean, a chaetognath, a mysid and an amphipod *Ampelisca sorbei* Dauvin & Bellan-Santini, 1996.

Jean-Claude was the supervisor of Marta Elizalde Arriaga PhD on The bathyal suprabenthic communities of the southern margin of the Cap-Ferret canyon (Bay of Biscay) defended at the University of Bordeaux in 1994 and with he continued to publish until 2014 on the suprabenthic fauna of the continental slope of the Bay of Biscay. Finally he had written with Inmaculada Frutos and Angelika Brandt a synthesis on deep communities, an article that will make a date on the knowledge of this interface compartment between the benthic and the pelagic systems (Frutos, I., Brandt, A., Sorbe, J.C., 2017. Deep-Sea Suprabenthic Communities: The Forgotten Biodiversity. Marine Animal Forest, 475-503).

Jean-Claude at the 17th ICA International Colloquium on Amphipoda, September 2017, Trapani, Italy

Jean-Claude still had many projects that we had discussed at the last conference on amphipods last August 2019 in Dijon, he disappeared suddenly too early to bring them to completion.

Jean-Claude was a colleague, a friend, with whom it was very pleasant to work and exchange, even though we met too rarely, he spoke passionately about his crustaceans and his mountain hikes. The amphipod and crustacean community will miss him.

Jean-Claude Dauvin, July 22, 2020

Ampelisca sorbei Dauvin & Bellan-Santini 1996

Vadim V. Takhteev In Memoriam

"You need to do miracles with your own hands"

(Alexander Green " Crimson Sails ")

The note is dedicated to Doctor of Biological Sciences, Professor Vadim V. Takhteev. His professional and life path and main scientific achievements are briefly presented.

This photo was made at Black Sea, Sevastopol in October, 2017 during Conference "Prospects and directions development of aquatic ecology ", dedicated to famous ecologists Viktor S. Ivleva and Irina V. Ivleva

Good scientists become due to good teachers, hard work and the ability to set any goals for themselves and achieve them. Doctor of Biological Sciences and Professor of Irkutsk University, Vadim V. Takhteev possessed just such a character. He loved to work tirelessly and as a result, he discovered many new and unknown things for science. There were no harbingers of trouble, but on August 25, 2020, at the age of 55, Vadim Takhteev's life suddenly ended...

Vadim Takhteev was born on March 27, 1966 in Irkutsk. In 1988 he graduated with honors from the Faculty of Biology and Soil Science of the Irkutsk State University. During 1988–1990 he was affiliated at Limnological Institute of the Siberian branch of the USSR Academy of Sciences. In 1990–1991 Vadim was a assistant at the Department of hydrobiology and invertebrate zoology in the University. From 1992 to 1994 he continued as a PhD student at this University, where in 1994 he had successful defense of his dissertation focusing on taxonomy and ecology of Baikal amphipods. This work was supervised by famous scientist Yaroslav I. Starobogatov, the famous Russian zoologist, professor and chief scientist at the Zoological Institute of the Russian Academy of Sciences. In the course of further career, Vadim Viktorovich was the head of the Baikal Museum, researcher, assistant professor at the university. In 2001, at the Zoological Institute of the Russian Academy of Sciences, he defended his doctoral dissertation entitled "Amphipods of Lake Baikal, their taxonomy, phylogeny, evolution, distribution and ecology."

Since 2003, Vadim has worked as a Professor at the Department of Hydrobiology and Zoology of Invertebrates at Irkutsk state university (ISU). The main discipline in which Vadim

Female *Pachyschesis indiscretus* (total length 8 mm) – 1,
male *P. pingiculus* (4,8 mm) – 2

Vadim was a member of the dissertation council at Irkutsk State University, chairman of the Irkutsk (Baikal) branch and a member of the Central Council of the Hydrobiological Society at the Russian Academy of Sciences, vice-president of the Russian Carcinological Society and a full member of the Moscow Society of Nature Experts. He was in the Federal Register of Experts in the Field of Scientific and Technical Knowledge of the Russian Federation and Experts of the Russian Academy of Sciences, was a member of the Commission for the Protection of Rare and Endangered Plants, Animals and Other Organisms under the Government of the Irkutsk Region.

Pachyschesis lamakini Tachteev, sp. n., female
(general view, holotype)

Viktorovich taught classes for students of the Biology and Soil Faculty of Irkutsk State University is "Baikalovedenie [Baikal Science]". In 2009, as one of the executive editors, he created a team of authors from 46 leading scientists of the Baikal region and began preparing a fundamental two-volume book on this subject, which should become a detailed textbook for students and, at the same time, a handbook for scientists. The book was published in 2012. In 2014, Vadim became the Laureate of the Irkutsk Region Competition and the Governor's Prize in Science and Technology.

Vadim managed a number of grants from the Russian Foundation for Basic Research, two projects under the Program on Conservation of Russia's Biodiversity ("Baikal Component"), a government contract under the federal program "Priority Areas for the Development of Science and Technology" as well as grants from the Irkutsk Regional Branch of the Russian Geographical Society.

During his scientific career, Professor Tachteev wrote over 200 scientific, popular science and educational-methodical publications; including seven personal and collective monographs, three popular science books, four textbooks. For the popularization of knowledge about the Nature of Lake Baikal, Vadim was awarded a Diploma of the Ministry of Natural Resources of the Russian Federation.

The scientific interests of Vadim Takhteev were taxonomy, ecology and evolution of amphipods and other endemic fauna of Lake Baikal. Also, he analyzed fauna and studied ecology of community in thermal and mineral springs, small mountain streams and alpine lakes of the Baikal region. Furthermore, he devoted a lot of time to the historiography of scientific research on Lake Baikal.

The main scientific achievement by Vadim Takhteev can be confidently considered a complete revision of Baikal amphipods. In his opinion, 7 families, 41 genera and 276 species, 78 sub-species are represented in Lake Baikal. These Baikalian species contribute 61% to the total diversity of Amphipoda of the of continental waters of Russia (Takhteev et al. 2015). From Baikal and its surroundings, he described 3 families, 1 subfamily, 2 genera, 2 subgenera, 34 species and subspecies of amphipods that are new for science.

Pachyschysis vorax, female

Vadim Takhteev firstly substantiated and applied a typological approach to the systematization of Baikal amphipods. he studied the distribution of amphipod species according to biotopes; carried out a classification of their life forms, paying special attention to predators and scavengers (vulture amphipod).

One of the interesting moments was his discovery of a new species of amphipods, well adapted to living in conditions of strong currents and cold water in the region of the Khamar-Daban mountain range. This crustacean was named after these mountains - *Gammarus dabanus*. This was the first record in the Baikal region of gammarid living not in stagnant, but in fast-flowing waters.

Vadim Takhteev carried out a taxonomic revision of several separate genera - *Poekilogammarus*, *Plesiogammarus*, *Odontogammarus*. One of the species, *Echinogammarus borealis*, was described by Sovinsky (1915), but “lost” in the later works, was revised by V. Takhteev and synonymized with *Carinogammarus cinnamomeus* (Dybowsky).

Pachyschysis vorax, male

He tried to revise the most difficult and polymorphic genus of Baikal amphipods, *Eulimnogammarus*, applying the approaches of phenetic taxonomy. He also conducted detailed ecological studies of three coastal species from the genus *Eulimnogammarus* and two species from the genus *Pachyschysis*, inhabiting the marsupia of females and the gill cavities of males of large amphipods. For the latter genus, he confirmed the parasitic nature of the relation

with the hosts. He discovered a large taxonomic diversity within the genus *Pachyschesis*. Currently, this genus includes 16 species.

In his research, Vadim applied new methods. Together with an electronic engineer Sergey L. Arakelov from Applied Physics Institute ISU, a system for remote underwater video surveillance was designed (2013). This system was used to study the phenomenon of diel vertical migrations, to observe the distribution of animals and plant organisms at the lake floor as well as to describe the bottom landscapes and biocenoses. In the future, such video surveillance may become one of the methods for regular environmental monitoring of processes occurring in the coastal zone of Lake Baikal. Such video-observations are also suitable as one of the methods of regular environmental monitoring of processes occurring in the coastal zone of Lake Baikal.

Colleagues remember Vadim as a fascinating storyteller and an interesting interlocutor who delves deeply into the question. At the same time, in matters of Lake Baikal, he was extremely principled, firmly and consistently insisted on the dissemination of scientific knowledge and reliable information about its current ecological state of Lake Baikal.

Vadim was a good person, great scientist, wonderful teacher, worthy and reliable scientific leader, and the leading Baikalist of our time. He belongs to a constellation of world-class scientists.

(*H. shoemakeri* n. sp. from 23°25'S, 43°00'W, Rio de Janeiro State. With a key to all *Heterophoxus* species)

Andrade, L. F. & A. R. Senna 2020. Four new species of *Pseudharpinia* Schellenberg, 1931 (Crustacea: Amphipoda: Phoxocephalidae) from southwestern Atlantic and new records of *P. tupinamba* Senna & Souza-Filho, 2011. — *Zootaxa* 4763, 501-537. <https://doi.org/10.11646/zootaxa.4763.4.3> (Deals with *P. bonhami* n. sp. (24°58'S, 45°26'W), *P. jonesyi* n. sp. (26°34'S, 47°59'W), *P. pagei* n. sp. (23°53'S, 42°28'W), *P. planti* n. sp. (23°03'S, 42°19'W) & *P. tupinamba*. A key to all *Pseudharpinia* is provided.)

Andrade, L. F. & A. R. Senna 2020. *Atlantiphoxus wajapi* n. gen., n. sp. (Crustacea: Amphipoda: Phoxocephalidae), a new deep-sea amphipod from the southwestern Atlantic. — *Scientia Marina* 84(2), 1-12. <https://doi.org/10.3989/scimar.05001.16A> (Deals with *Atlantiphoxus wajapi* n. gen., n. sp. from 23°53'S, 42°28'W, 500m depth.. A table differentiates this genus from *Fuegiphoxus*, *Linca* and *Parharpinia*).

Andrade, L. F. & A. R. Senna 2020. New and additional records of *Metharpinia* Schellenberg, 1931 and *Microphoxus* Barnard, 1960 (Crustacea: Amphipoda: Phoxocephalidae) from Brazilian waters. — *Papeis Avulsos de Zoologia* 60, e20206022. <https://doi.org/10.11606/1807-0205/2020.60.22>. (Deals with *Metharpinia dentiurosoma*, *M. grandirama*, *M. iada*, *Microphoxus cornutus* and *M. unoserratus*. With a discussion of the genus complex and key to all *Metharpinia* and *Microphoxus*)

Andrade, V. S., C. Wiegand, A. Pannard, A. M. Gagneten, M. Pédrot, M. Bouhnik-Le Cruz & C. Piscart 2020. How can interspecific interactions in freshwater benthic macroinvertebrates modify trace element availability from sediment? ---- *Chemosphere* 245, 125594 <https://doi.org/10.1016/j.chemosphere.2019.125594>

Angyal, D., E. M. Chavez-Solis, L. A. Lievano-Beltran, B. Magaña, N. Simoes & M. Mascaro 2020. New distribution records of subterranean crustaceans from cenotes in Yucatan (Mexico). --- *ZooKeys* 911, 21-49. <https://doi.org/10.3897/zookeys.911.47694> (i.a. *Mayaweckelia troglomorpha*, *M. cenoticola* and *Tuluweckelia cernua*.)

Arezoo, M. 2019. Studies on interstitial biological indicators (amphipods and isopods) in sandy beaches of Okinawa Island. ——— *Thesis from the University of the Ryukyus* <http://hdl.handle.net/20.500.12000/44889> (Not seen)

Arfianti, T. & M. J. Costello 2020. Global biogeography of marine amphipod crustaceans: latitude, regionalization and beta diversity. ---- *Marine Ecology Progress Series* 630, 83-94 <https://doi.org/10.3354/meps13272>

Ariyama, H. 2019. Two species of *Ceradocus* collected from coastal waters in Japan, with description of a new species (Crustacea: Amphipoda, Maeridae). ---- *Zootaxa* 4658, 297-316. <http://dx.doi.org/10.11646/zootaxa.4658.2.5> (Deals with *C. kiiensis* n. sp. (Ena, Yura Town, Wakayama Pref.) and *C. laevis*. With a key to Japanese *Ceradocus*.)

Ariyama, H. 2020. Species of the *Maera*-clade from Japan. Part 3: genera *Maera* Leach, 1914, *Meximaera* Barnard, 1969 and *Orientomaera* Ariyama, 2018 (addendum), with a key to Japanese species of the clade (Crustacea: Amphipoda: Maeridae). ---- *Zootaxa* 4743, 451-479. <https://doi.org/10.11646/zootaxa.4743.4.1> (Deals with *Maera loveni*, *M. sagamiensis* n. sp. (Sagami Bay, Kanagawa pref.), *Meximaera mooreana*, and *Orientomaera incisa* n. sp. (Tagurazaki coast, Wakayama city, Wakayama pref.). Keys to all *Meximaera*, and to all Japanese species in the *Maera* clade, are provided.)

Ariyama, H. 2020. Six species of *Grandidierella* collected from the Ryukyu Archipelago in Japan, with descriptions of four new species. ---- *Zootaxa* 4816, 1-46. <https://doi.org/10.11646/zootaxa.4816.1.1> (Deals with *G. contigua* n. sp. (Jakushima Island, Kagoshima pref., *G. gilesi*, *G. halophila*, , *G. japonicoides* n. sp. Amai-oshima Island, Kagoshima pref.), *G. nana* n. sp. (Iriomote Island, Okinawa pref.) and *G. pseudosakaensis* n. sp. Iriomote Island, Okinawa pref.). A key to male Ryukyu Islands *Grandidierella* is provided. The genus *Propejanice* is here considered a junior synonym of *Grandidierella*.)

Ariyama, H. & O. Hoshino 2019. A new superfamily, family, genus and species of marine amphipod, *Protodulichia scandens*, from Japan (Crustacea: Amphipoda: Senticaudata: Corophiida). ---- *Journal of Natural History* 53, 2467-2477. <https://doi.org/10.1080/00222933.2019.1704588> (A most intriguing new taxon with a special way of life, from Izu Oshima Island, Tokyo pref., Japan)

Artal, M. C., K. D. Pereira, A. D- Luchessi, V. K. Osaka, T. B. Henry, H- Marques-Souza & G. de A. Umbuzeiro 2020. Transcriptome analysis in *Parhyale hawaiiensis* reveal sex-specific responses to AgNP and AgCl exposure. ---- *Environmental Pollution* 269:113963 <https://doi.org/10.1016/j.envpol.2020.113963>

Arundell, K. L., A. Dubuffet, N. Wedell, J. Bojko, M. S. J. Rogers & A. M. Dunn 2019. *Podocotyle atomon* (Trematoda: Digenea) impacts reproductive behaviour, survival and physiology in *Gammarus zaddachi* (Amphipoda). ---- *Diseases of Aquatic Organisms* 136, 51-62. <https://doi.org/10.3354/dao03416>

Ashford, O. S., T. Horton, C. N., Roterman, M. H. Thurston, H. J. Griffiths & A. Brandt 2019. A new Southern Ocean species in the remarkable and rare amphipod family Podosiridae (Crustacea: Amphipoda) questions existing systematic hypotheses. ---- *Zoological Journal of the Linnean Society* XX, 1-16. <https://doi.org/10.1093/zoolinnean/zlz145> (Deals with *Acutocoxae ogilviae* Ashford & Thurston n. sp. (Southern Ocean 60° 72'S, 43°01'W, 1139m). The phylogenetic position of the family Podosiridae is extensively discussed from morphological and molecular data; it appears to have no close relations to Podoceridae or Eusiridae, but rather to the Stenothoidae. Further molecular research is necessary.)

Ashford, O. S., A. J. Kenny, C. R. S. Barrio Frojan, M. B. Bonsall, T. Horton, A. Brandt, G.J. Bird, S. Gerken & A. D. Rogers 2018. Phylogenetic and functional evidence suggests that deep-ocean ecosystems are highly sensitive to environmental change and direct human disturbance. ---- *Proceedings of the Royal Society B* 285, 20180923 <http://tx.doi.org/10.1098/rpsb.2018.0923>

Astakhov, M. V. 2019. Drift of invertebrates in two streams of Kunashir Island (Kuril Islands). ---- *Inland Water Biology* 12, 428-435 <https://doi.org/10.1134/S1995082919040035> (*Eogammarus kygi*)

Avila, C., C. Angulo-Preckler, R. P. Martin-Martin, B. Figuerola, H. J. Griffiths & C. L. Waller 2020. ---- Invasive marine species discovered on non-native kelp in the warmest Antarctic island. ---- *Scientific Reports* 10: 1639. <https://doi.org/10.1038/s41598-020-58561-y> (Deception Island)

Ayati, K., R. Hadjab, H. Khammar, S. Dhaouadi, C. Piscart & E. Mahmoudi 2019. Origin, diversity and distribution of freshwater epigeal amphipods in Maghreb. ---- *Annales de Limnologie* 55, 13. <https://doi.org/10.1051/limn/2019012>

Axenov-Gribanov, D. V., D. S. Bedulina, Y. A. Shirokova, V. A. Emshanova, Y. A. Lubyaga, K. P. Vereshchagina, A. E. Saranchina, T. P. Pobeshimova & M. A. Timofeyev 2019. Diet influence on mechanisms of non-specific stress-response in Baikal endemic amphipod species during long-term laboratory exposure. ---- *Crustaceana* 92, 1349-1368. <https://doi.org/10.1163/15685403-00003951>

NEW TAXA

(In the listing of new taxa we have included all that is available online or in print. This is a larger set of new taxa than what is covered as accepted new taxa by the International Code of Zoological Nomenclature (<http://www.iczn.org/code>). Taxa that are not as yet properly covered by the code as accepted (and thus not added to WoRMS (<http://www.marinespecies.org/>)) are marked with an * in font in the alphabetical list.)

ERRATA FROM AN 43:

Orientogidiella Sidorov, Ranga Reddy & Shaik, 2018 Austroniphargidae

is incorrect. This should (of course) be in the family Bogidiellidae. We apologize and thank Mikhail Daneliya for spotting this and bringing it to our attention!

HIGHER TAXA

Magnovioidea Alves, Lowry & Jonsson, 2020	superfamily
Protorchestoidae Myers & Lowry, 2020	(epifamily in Talitroidea)
Protodulichoidae Ariyama, 2019	superfamily
Talitroidae Rafinesque, 1815	(epifamily in Talitroidea)

Talorchestia **anakao**, **lakshadweepensis**

Tryphosidae

Lepidepecreoides **stoddartae**

Compilation of Amphipod relevant literature

Please tell the AN editors and Olli Coleman about your recent publications on amphipods - and send a pdf of your paper. Olli can include it on the server and the editors can include it in the bibliography....

Updates on the 19th ICA

Following the meeting of the Tunisian organisation committee, we decide in this uncertain time and because the pandemic to postpone the next ICA to 2022 .

The date of the next ICA will be in autumn 2022. It will held in Jerba Island and a web site of the colloquium is under construction.

All the best
Faouzia Charfi

The Old Photo

During his presentation at the 18th ICA in Dijon August 2019, José Guerra-García showed several old photos from the early amphipod meetings. José has shared these photos with the AN, and we plan to share them here, to make sure everybody have the possibility to enjoy these photographic gems. Thank you to José for collecting these pictures, and for making them available to everybody.

We have tried to annotate the photos, but many names are missing or even uncertain. If anybody who are in the pictures (or who recognises people not named or wrongly named in the annotated photos) could help us with names of the participants, we will be very happy for the help. Please email the editors - we promise to share the updated annotations!

Lyon 1973 (photographer unknown)

And the original (without annotations):
